

DISCOVERY SESSIONS - HIGHER EDUCATION

We offer enriching, curriculum-linked sessions designed to enhance and consolidate children's learning. These hands-on sessions are brought to life with activities relating to the natural world using bio-facts (skulls and skins), and up to three live animals. Functional skills are embedded throughout our sessions.

Detailed below are the exciting range of education sessions that we offer Higher Education students. All sessions last 45 minutes.

Careers @ WMSP

There are many different animal-related careers at WMSP. This session explores the variety of roles available within the industry and considers the skills and qualifications essential for success.

Controversial Conservation

WMSP is home to a variety of animals listed as 'Endangered' on the IUCN Red List of Threatened Species. This session considers the threats these animals face in the wild and the work WMSP carries out both at home and abroad to help them. Become inspired to be a proactive force in preserving our planet and animals for future generations.

Animal Management

This session looks at the importance of zoos and safari parks and explores how they provide people with connections to nature to educate them about conservation issues. Discover how we inspire guests and encourage them to change behaviour in ways that positively affects the conservation of wildlife. This session includes looking at managing breeding programs, research into conservation activities, veterinary care and habitat management.

**If you would like to book a session, please call
